

Precious OBI

SOFTWARE ENGINEER

Lagos, Nigeria | +2347032937596 | obbyprecious24@gmail.com | LinkedIn: [Precious](#) | GitHub: [Precious](#)

SUMMARY

Software developer focused on building reliable and scalable systems that work well under real-world use. Skilled in Python and .NET, creating backend solutions that support business needs and improve product performance. Enjoy finding better ways to solve problems, learning new tools quickly, and working with teams to deliver results. Passionate about making products strong, fast, and easy to use, while helping teams grow and succeed

CORE SKILLS

- **Programming Languages:** (Python, Go, C#)
 - **Frameworks:** (FastAPI, .NET, React, .NET)
 - **Databases:** (Postgres, MongoDB, NEO4J, Redis)
- **Tools & Devops:** Docker, Redis, NGINX, Git, GitHub Actions (CI/CD)
 - **Web & APIs:** REST, GraphQL

PROFESSIONAL EXPERIENCE

Workstedi – Backend Developer

Dec 2023 - Nov 2025

- Built a subscription billing system with different plan levels (FastAPI, MongoDB) that handled recurring payments automatically, reducing manual mistakes by 90% and increasing subscription retention by 15%.
- Created a secure payment workflow for a job marketplace feature (like Upwork) that processed client charges and vendor payouts automatically, handling over 5,000 transactions/month and increasing client trust, reflected in a 20% rise in accepted proposals.
- Collaborated with product and design teams to deliver APIs for scalable data sharing, supporting 200k+ monthly requests with 99% uptime.

Borderless HQ – Full Stack Developer

Oct 2024 - Present, Contract

- Migrated frontend from Go templating (Pongo2) to Vue.js, creating a dynamic, component-based interface, reducing page load times by 30-40% and cutting frontend maintenance time significantly.
- Built scalable Go microservices for core logistics and user management, helping improve system reliability and uptime.
- Integrated Meilisearch to give users fast, typo-friendly search across deliveries and user records.
- Created a cross-platform mobile app with Vue.js and Capacitor, giving mobile access to important features and improving user engagement.

Volcred – Backend Developer & Founder

2024

- Designed and led the development of a platform that connects NGOs with volunteers, adding features like user login and job management to make job matching easier.
- Built backend functions for creating organizations, handling logins, and managing job workflows, making the platform easy to use for both volunteers and organizations.
- Set up GitHub Actions CI/CD pipelines to automate testing and deployment, speeding up development and reducing release times.
- Worked with teams across different roles to agree on plans and timelines, delivering the platform on schedule.

- Updated key RESTful APIs by adding Redis caching and async processing, cutting response times and making the system more reliable.
- Improved database queries and data models to handle more traffic, boosting scalability and performance.
- Worked with teams across different roles to roll out performance improvements and keep the platform stable.

PROJECTS

Monetra (2025): Full-stack Budget Tracking Web App

- Built a full-stack web app using FastAPI and React for multi-currency budget tracking.
- Implemented real-time exchange rate conversion to ensure accurate financial insights.
- Integrated secure authentication and PostgreSQL for data management.
- Optimized API performance and frontend responsiveness, improving load times.
- Helping nearly 100 users manage their finances through accurate finances

Whisper Link (2025): Real-time Chat Application

- Built a full-stack real-time chat app with a Go (Golang) backend and React frontend.
- Implemented GraphQL APIs, authentication, and WebSocket-based real-time messaging.
- Integrated a Neo4j social graph to model and visualize user connections dynamically.
- Enabled instant, live chat without page refresh, improving interaction latency and user engagement.

E-commerce API (2024): Backend Development Project

- Built a secure e-commerce backend using FastAPI (Python) with modular REST architecture.
- Designed and implemented RESTful endpoints for product browsing, cart management, and order processing.
- Integrated Paystack for seamless and secure payment handling.
- Added inventory tracking to prevent overselling and maintain accurate order records.
- Ensured performance and reliability through input validation, error handling, and database optimization

EDUCATION

- | | |
|---|--------------------|
| • Diploma in Python with Flask, National Institute of Information and Technology | 2023- 2024 |
| • Bachelor of Science in Computer Science, Anchor University, Ayobo, Lagos State | 2020 - 2024 |

• ADDITIONAL INFORMATION

- **Languages:** English, German (Beginner, B2 goal in progress).
